

CHEMICAL SEAL GAUGES

Used to separate the pressure gauge from the pressure medium whilst enabling accurate measurement of pressure / vacuum. These are particularly required where the pressure medium is hot, corrosive, abrasive or of high viscosity or carrying solids in suspension. Seals are normally st/steel but can be hastelloy, monel, tantalum, PTFE or other special materials.

Many threaded or flanged, male or female process connections available together with PTFE and other material linings.

These instruments are built to special order to customer specification. Please contact us for further information or quotation.
